Top 3 Power BI Projects for Advanced Knowledge

1. End-to-End Enterprise Supply Chain & Logistics Analytics

- **What you'll learn:** Multi-fact schema design, complex Power Query transformations, advanced DAX time-intelligence patterns, and dynamic-level security (RLS).
- **Core Topics Covered:** Star schema optimization, handling bidirectional relationships safely, calculating rolling averages, year-over-year growth, fulfillment rates, and inventory turnover using DAX.
- **Recommended Guided Resource:** Power BI Project End-to-End | Logistics Dashboard

2. Financial Performance & P&L Statement Modeling

- **What you'll learn:** Custom financial statement matrices, calculation groups, treating unbalanced hierarchies, and handling complex currency conversions.
- **Core Topics Covered:** Writing advanced DAX calculation groups to minimize measure proliferation, dynamic formatting based on user selection (e.g., switching between currency and percentage), and variance analysis (Actual vs. Budget).
- **Recommended Guided Resource:** Power BI Project: Complete Dashboard Tutorial

3. Real-Time IoT Sensor Data or Healthcare Fraud Detection

- **What you'll learn:** Streaming datasets, handling high-volume telemetry or anomaly detection, and optimizing performance for massive data models.
- **Core Topics Covered:** Row-level security scaling, incremental data refresh implementation, aggregations, and integrating AI insights/smart narratives into dashboards.
- **Recommended Guided Resource:** Advanced Power BI Project

Top 3 Tableau Projects for Advanced Knowledge

1. Advanced Analytics & Executive KPI Storytelling Dashboard

- **What you'll learn:** Designing dynamic layouts using layout containers, parameter actions, set actions, and advanced level-of-detail (LOD) expressions.
- **Core Topics Covered:** Using FIXED, INCLUDE, and EXCLUDE LODs to solve complex cohort analysis or running total problems independently of view filters, building custom KPI cards, and implementing navigation buttons for multi-page UI layout.
- **Recommended Guided Resource:** A TABLEAU PORTFOLIO PROJECT to showcase ADVANCED visualization skills

2. E-Commerce Customer Segmentation & RFM Analysis

- **What you'll learn:** Combining data densification techniques, advanced table calculations, and complex geographic/spatial mapping layers.

- **Core Topics Covered:** Recency, Frequency, Monetary (RFM) analysis using custom calculated fields, binning continuous variables dynamically, creating custom dual-axis maps, and leveraging custom shapes and tooltips.
- **Recommended Guided Resource:** Tableau Dashboard Tutorial | Build a Complete Portfolio Project

3. Financial Portfolio Risk & Return Analysis Simulator

- **What you'll learn:** Advanced parameter-driven scenario modeling, trend lines, forecasting models, and statistical distribution charts (box plots, scatter plot matrices).
- **Core Topics Covered:** Utilizing Tableau's built-in predictive modeling functions, table calculation scripting for moving correlations, and structuring an analytical user experience where stakeholders can test "what-if" parameters live.
- **Recommended Guided Resource:** The TABLEAU PORTFOLIO PROJECT to make you STAND OUT from the crowd
